

K→FORCE Waste UK

Built stronger. Proven longer. 5-Year Warranty.

Options

Folding bumper – more space, more comfort

Unloading above a bunker? The folding bumper allows you to easily create extra height behind the trailer. The bumper folds away from the unloading area, so you can work faster and safer, without damaging the lights or leaving residue on the bumper. Manual or remote control. This feature is standard on the K-Force Waste and popular with many other applications.

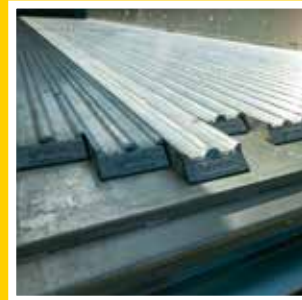

Steel top rail protection

Steel plates on the upper edge of your K-Force provide extra protection. The upper edge is protected when loading heavy materials with a crane, for instance. The protective plates are easy to replace in case of damage.

15-slat XHDI moving floor – built for heavy-duty waste work

Waste and recycling demand a floor that can take a beating. The 15-slat XHDI aluminium floor is highly impact-resistant and designed for unloading heavy, irregular cargo. Fewer joints mean less wear and lower maintenance. Reliable for every load, every day – ensuring maximum uptime and minimal disruption.

HD 5th wheel lead up Built-in protection

This heavy-duty steel ramp plate extends from the 5th wheel to the front bulkhead. It provides a smooth transition for the fifth wheel during coupling and uncoupling, significantly reducing the risk of damage to the front wall or chassis. This integrated protection feature is particularly valuable in waste transport, where frequent trailer changes are common, as it enhances durability and helps minimise downtime.

Wear plates – extra protection where it matters

Heavy loads mean heavy impact. That's why K-Force Waste features wear plates at the rear (left and right) and at the front of the trailer. These aluminium plates (6000x2000 mm rear, 6000x1000 mm front) protect the body from damage caused by rough materials. Less wear, longer trailer service life – even under the toughest conditions.

Hydroclear® Sheet System – For clean, controlled loads

The optional Dawbarn Hydroclear® Sheet System provides quick, waterproof load coverage from ground level. It is especially suited to heavy-duty waste transport, enhancing safety, preventing contamination, and protecting the cargo in all weather conditions.

1**Chassis for a strong base**

The Z-shaped high tension S700 chassis beams provide a strong base for the trailer. The high-tension steel chassis beams are designed to absorb high forces. This increases the durability.

**2****Avoid wear and tear on the rear**

The patented anti-lifting structure at the back is 2x stronger than the market standard. Combined with the steel rear beam, the floor boards are guaranteed to remain tightly attached to the subfloor. As a result, hardly any residue is left between and underneath the floor and you avoid wear and tear on the rear.

**3****Extra strong above the axle assembly**

The section above the axles is particularly susceptible to wear. K-Force has crossbeams and extra reinforcement plates here. This provides a sturdy floor structure and a rigid semi-trailer.

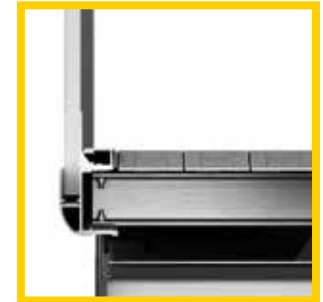

The peak stresses are distributed over a larger area when taking a corner. The shape retention ability prevents wear, which extends the service life of your floor.

**4****Service life extending smart floor structure**

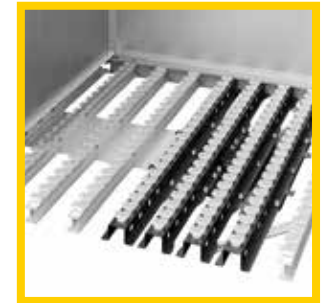

The long service life of the floor is due to the unique and most effective support of 41 aluminium profiles. The aluminium crossbeams have a short centre-to-centre distance. The closer together, the greater the support.

**5****The unique wall connection ensures ultimate shape retention**

The walls are secured with 41 x 4 bolt connections for even transfer of forces from the load to the side wall. The lack of welding eliminates fatigue cracks and loss of strength due to the introduction of heat, even after years of intensive use.

**6****Steel where it counts – for maximum service life**

Smartly positioned steel reinforcements provide a dimensionally stable, sturdy trailer that will last for years. The steel kingpin section, steel head corners, and reinforcement cross absorb the heaviest forces. This ensures that your moving floor continues to operate smoothly and that the trailer remains reliable under all conditions.

Why K-Force Waste?

BUILT FOR HEAVY DUTY WORK

The waste management industry imposes significant demands on materials, construction, and service life. Moving floor trailers in this industry are exposed to heavy loads, abrasive materials, and intensive use on a daily basis. Only the strongest trailers remain standing. Your K-Force Waste will continue to work effortlessly for many years under these tough conditions.

STRONG

K-Force Waste combines low tare weight with maximum power. Smart material combinations combined with targeted reinforcements make this trailer resistant to the heaviest loads – without compromising on efficiency or service life.

STRENGTH FROM THE GROUND UP

What makes K-Force Waste different? Our floor construction includes more cross-members than the market standard. This allows for more even distribution of force and significantly increases rigidity. The special Extreme Heavy Duty Impact floor, combined with wear plates and extra reinforcements above the wheels, makes this trailer ready for the toughest waste applications.

5-YEAR WARRANTY

K-Force Waste provides the power you expect, with the efficiency you need. That is why we are confident to offer a standard 5-year warranty on the construction. We are unique in this regard. If you should sell your K-Force, this warranty will be transferred to the new owner. This makes K-Force an even more interesting option. Your trailer therefore retains its value, and the new owner receives the security of a warranty.

BUILT TO PERFORM

K-Force Waste has been designed to perform day in, day out in the toughest conditions. The robust floor construction, reinforced components, and versatile options make this trailer suitable for a wide range of waste processing applications. Whether you are dealing with heavy industrial waste, construction and demolition materials, or waste streams with a high wear factor: K-Force Waste continues to function reliably. Maximum availability means less downtime, less maintenance, and higher returns per kilometre.

This is Kraker

The Kraker promise

With the Dutch pragmatic approach, we get straight to the point: produce moving floor trailers with the highest yield. Your **convenience** and **efficiency** enjoy top priority. The proof? K-Force: the most efficient and **reliable moving floor trailer** on the market with a long service life and smart features that allow you to work safer and easier.

Focus

Moving floor trailers. That is what Kraker has been focusing on **since 1989**. We continuously incorporate user experience during the development and production of trailers to provide you with the most efficient and cost-effective vehicle.

Pride

You are proud undoubtedly of your moving floor trailer, and so are we! And on the people who develop, build and sell the trailers. We succeed together. We meet your **expectations** and often also **exceed** them.
